

WHAT IS CLAIMED IS:

1. A mucin adhering substance, said substance comprising a continuous positively charged hydrophilic head group covalently attached to a hydrophobic tail group:

5 consisting of a plurality of said substance
 attachments to mucin coated surfaces;
 said substance functioning in concert with other
 said substances;
 whereby, said substances are capable of sequestering
 organic molecules;
 whereby, said organic molecules may leach from said
 substances;

2. The substance of claim 1 comprising a class of amphiphilic quaternary ammonium compounds.

3. The organic molecules of claim 1 being a therapeutic or comestible.

4. The substance of claim 2 belonging to a class of quaternary ammonium compounds comprising: cetyl konium chloride, cetyl dimethyl ethyl ammonium bromide, benzyl triethyl ammonium
 20 chloride, cetyl trimethyl ammonium para toluene sulfonate, cetyl trimethyl ammonium bromide, distearyl dimethyl ammonium methosulfate, tetra n-butylammonium bromide, myristyl trimethyl ammonium bromide, cetyl dimethyl benzyl ammonium chloride, cetyl pyridinium bromide, cetyl trimethyl ammonium chloride, stearyl
 25 dimethyl benzyl ammonium chloride, cetyl trimethyl ammonium

stearate, benzal konium chloride, domiphen bromide, methyl
benzethonium chloride.

5. The comestible of claim 3 being a menthol flavorant

6. The therapeutic of claim 3 being an anesthetic,

5 analgesic, antibiotic, antifungal, antitoxin, antihistamine,
antineoplastic, antihelminthic, bronchial dilator, or ophthalmic.
